Flyflox
MAPP 17694

A suspension concentrate formulation containing 500 g/l (42% w/w) diflufenican.
A herbicide for the control of certain germinating broad-leaved weeds in wheat, barley, rye, durum wheat and riticale.

THE (COSHH) CONTROL OF SUBSTANCES HAZARDOUS TO HEALTH REGULATIONS MAY APPLY TO THE USE OF THIS PRODUCT AT WORK.

SAFETY PRECAUTIONS

Operator Protection
WASH CONCENTRATE FROM skin or eyes immediately.

AVOID ALL CONTACT BY MOUTH.

KEEP OUT OF THE REACH OF CHILDREN.

Environmental Protection
To protect aquatic organisms, respect an unsprayed buffer zone to surface water bodies as specified in the official three star rating for that equipment as published on HSE Chemicals Regulation Directorate’s website. Maintain three star operating conditions until 30 m from the top of the bank of any surface water bodies.

DO NOT ALLOW DIRECT SPRAY from horizontal boom sprayers to fall within the distance specified for the crop to the top of the bank of a static or flowing water body, or within 1 m of the top of a ditch which is dry at the time of application. Aim spray away from water.

NOTE: BUFFER ZONES OF MORE THAN 5M CANNOT BE REDUCED UNDER THE LOCAL ENVIRONMENT RISK ASSESSMENT FOR PESTICIDES (LERAP) SCHEME.

The statutory buffer zone must be maintained and the distance recorded in Section A of the LERAP record form.

The LERAP record form must be kept available for three years.

Storage and Disposal
KEEP OUT OF THE REACH OF CHILDREN.

KEEP AWAY FROM FOOD, DRINK AND ANIMAL FEEDINGSTUFFS.

KEEP AWAY FROM FOOD, DRINK AND ANIMAL FEEDINGSTUFFS.

KEEP AWAY FROM FOOD, DRINK AND ANIMAL FEEDINGSTUFFS.

DO NOT RE-USE CONTAINER for any purpose.

Effectiveness using three star drift reduction technology may be reduced.

CROP SPECIFIC INFORMATION

Pre-or post-emergence use on winter wheat, winter barley, spring barley, rye and triticale; early post-emergence on durum wheat and post-emergence on spring wheat.

Do not treat undersown cereals or those due to be undersown.

Avoid spray drift onto neighbouring crops.

RATE OF USE AND TIMING

Apply 0.25 L/ha FLYFLO pre- or post-crop emergence, up to the end of February on winter wheat, winter barley and spring barley. Alternatively, a lower dose of 0.2 L/ha may be applied before 2nd node detectable (up to BBCH 31) on winter wheat (excluding durum wheat), winter barley and spring barley.

Apply 0.25 L/ha FLYFLO post-crop emergence, up to the end of February on durum wheat.

Use on spring wheat post-emergence is allowed up to the end of February at the dose of 0.25 L/ha or at the lower dose of 0.2 L/ha before 2nd node detectable stage (up to BBCH 31).

For rye and triticale apply pre- and post-crop emergence (up to BBCH 13).

WATER VOLUME

Apply as a MEDIUM spray (BCPC category) in 200-250 litres water/ha. Qualified recommendation: Lower water volumes of 100 L/ha may also be used, however these have not been supported by effectiveness or crop safety data.

SOIL CONDITION

Prepare a firm fine seedbed for best results, with clods no more than fist size. The crop should be sown to the normal depth of 25 mm. It is important to ensure that the seed is well covered. Good weed control depends on burying and dispersing of any trash or burnt straw before or during seedbed preparation.

For best results apply to a moist seedbed. Do not apply to dry, cracked or waterlogged soils.

Do not use on sands (Soil Texture [85] System) or very stony or gravelly soils due to risk of crop damage.

FOLLOWING CROPS

Plough to 150 mm and thoroughly mix the soil before drilling or planting any following crops (either after crop failure or normal harvest).

CROP FAILURE: If a crop fails for any reason, only re-drill with winter wheat or winter barley, after ploughing.

A period of 12 weeks must lapse after ploughing before spring crops of wheat, barley, oilseed rape, peas, field beans, sugar beet, potatoes, carrots, edible brassicas or onions may be drilled.

NORMAL HARVEST: In the autumn following normal harvest, only drill winter cereals, oilseed rape, field beans, leaf brassicas, sugar beet seed crops and winter onions. In the spring following normal harvest, only the spring crops listed above (under CROP FAILURE) can be drilled.

Occasionally seedlings of brassica crops may exhibit slight discoloration of the cotyledons, which is normally outgrown without affecting subsequent growth.
Where diflufenican containing products are applied to successive cereal crops, levels of diflufenican will build up in the soil. Even with ploughing to 150mm and thorough mixing of the soil, there may still be a risk of damage to following crops of onions, leeks, other allium crops and clover. As a precaution, users who rent out their land to growers of these crops should not use diflufenican containing products in successive years before renting out that land.

**MIXING AND SPRAYING**

Ensure the sprayer is clean and in good working order. Calibrate according to the sprayer manufacturers recommendations.

Half fill the spray tank with clean water and begin agitation. Add the required quantity of FLYFLO to the tank and complete filling. Continue agitation until spraying is complete.

Do not leave the sprayer standing with the spray mixture in it for a long period of time.

Wash out the sprayer thoroughly after use, using a wetting agent or a proprietary tank cleaner.

**DISCLAIMER/CONDITIONS OF SUPPLY**

The specified properties of our products and the mode of application stated on this label have been established on the basis of research and experience. Products conform to specification at the time of delivery but, as we exercise no control over their subsequent storage, handling, mixing or use or the weather conditions before, during and after application, all of which may affect the performance of the products, no responsibility or liability will be accepted by us or our re-sellers for any failure in performance, damage or injury to person or property whatsoever arising from the storage, handling, application or use of the products. These conditions cannot be varied by our staff or agents whether or not they supervise or assist in or make recommendations concerning the use of such products. We recommend you contact your dealer to request advice on the suitability of this product for any new and/or unusual growing methods or for new varieties not listed on this label.
